

To Infinity and Beyond

What will we see if we travel into space?

Key Vocabulary	
Space	The area above and around our planet. There is no air in space.
Moon	The large round object that orbits, or travels around, the Earth. The moon shines at night by reflecting light from the sun.
Sun	A huge star at the centre of the solar system.
Solar System	The sun and everything that orbits, travels around, it. This includes 8 planets and their moons.
Planets	We have 8 planets in our solar system including our planet Earth.
Earth	The planet on which we live. The Earth is always moving.
Astronaut	An astronaut is a scientist that travels into space to learn more about it.
Gravity	Gravity is what keeps us on the ground. The moon has very little gravity so things float about on the moon.

The first astronauts to land on the moon were Neil Armstrong, Buzz Aldrin and Michael Collins.

They were American astronauts.
