

What happened
to the dinosaurs?

History

Timelines give us an idea of what has happened
over a specific period of time.

Timelines can be made about any period of time.

There are many theories of
how the dinosaurs became
extinct...

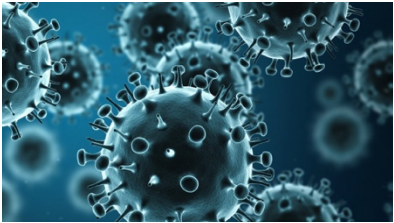

Most believe that a meteor
hit the earth, causing a huge
explosion, and therefore
wiping the dinosaurs out.

Some scientists believe
that climate change may
be responsible for the
extinction of dinosaurs.

Some scientists suspect that
volcanic activity may have
caused the dinosaurs death.

Others believe that insects
carrying diseases may have
brought an end to the dinosaurs.

Fossils are remains or a trace
of a once living thing and give
us clues as to what might have
happened. This may include
bones or shells of animals.

Key Vocabulary						
Dinosaurs	Timeline	Time period	Extinct	Fossil	Scientist	History
Volcano	Disease	Meteor	Climate Change	Jurassic	Triassic	Cretaceous
