

What happened to the dinosaurs?

Crumbling landmasses and inland seas.

Forests, ferns, and conifer filled forests.

Lots of mountains and volcanic activity.

A hot and dry climate that changed to humid and subtropical.

As humans were not on the planet during the Jurassic period, we don't have any photographs of the landscape however we can predict what it looked like from the information gathered over hundreds of years.

Key Vocabulary					
Landscape	Jurassic Period	Hot	Dry	Climate	Humid
Mountain	Volcano	Forest	Dinosaur	Predict	Landmass
Levers	Sliders	Mechanism
