

What happened to the dinosaurs?

Moveable Dinosaurs
 We will design, make and evaluate a variety of moveable dinosaurs, using levers. Thinking about what went well and what we might do differently next time.

Dinosaur Habitats
 As humans were not on the planet during the Jurassic period, we don't have any photographs of the landscape. However, we can predict what it looked like from the information gathered over hundreds of years. We will make our own dinosaur habitats, challenging ourselves to add moveable parts.
